HintsHub: The Digital Ecosystem Powering Green and Digital Skills

Helix has played a central role in activating the digital infrastructure of HINTS through the development and consolidation of the HintsHub platform. As the project's primary digital ecosystem, HintsHub now serves as a dedicated hub for collaboration, knowledge-sharing and resource distribution across vocational education and training (VET) providers, industry partners and learners. The platform brings together all major components of the HINTS pedagogical approach, including curated modules on digital competences, green industrial technologies, and innovative teaching and learning practices aligned with European VET standards.

In addition to hosting training content, HintsHub integrates interactive features such as industry-academia project spaces, best-practice repositories, and tools for curriculum adaptation. These functionalities allow institutions to collaborate more effectively, access harmonised learning materials, and directly engage with emerging green and digital transformation requirements in their regions.

Fully operational since its launch, HintsHub has demonstrated strong performance during the active engagement phase with VET providers across the Western Balkans and Southern Mediterranean. Trainers and institutional representatives have already begun piloting modules through the platform—providing valuable feedback that supports continuous improvement and ensures responsiveness to real training needs. With the infrastructure stabilised and user engagement steadily increasing, HintsHub is now ready for the next phase: wide-scale deployment of training modules, structured train-the-trainer actions, and deeper regional cooperation.
